HUMAN COMPUTER INTERACTION

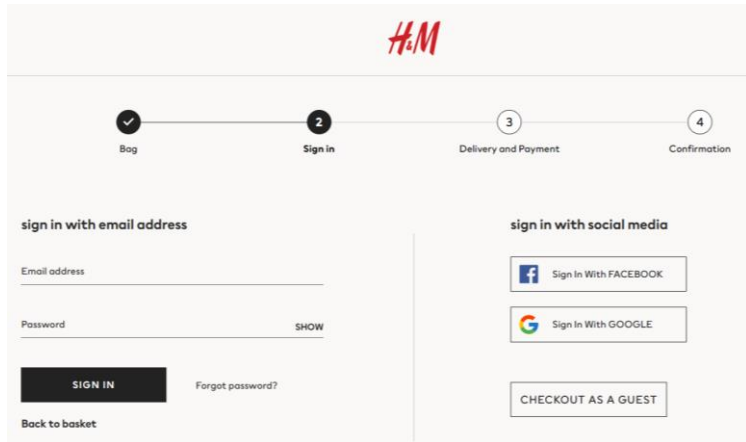

SEMESTER 2 SESI 2024

ASSIGNMENT 1: DESIGN PRINCIPLE

NAME	STUDENT ID	SECTION/GROUP
NUR RASYA ALEYA BINTI IBRAHIM	D032310142	2/2
AINA MAISARAH BINTI AZMAN	D032310368	2/2
NUR AINA BATRISYIA BINTI MOHD NOR	D032310254	2/2
NURAIN BATRISYIA BINTI MOHD NOR AZWAN	D032310348	2/2

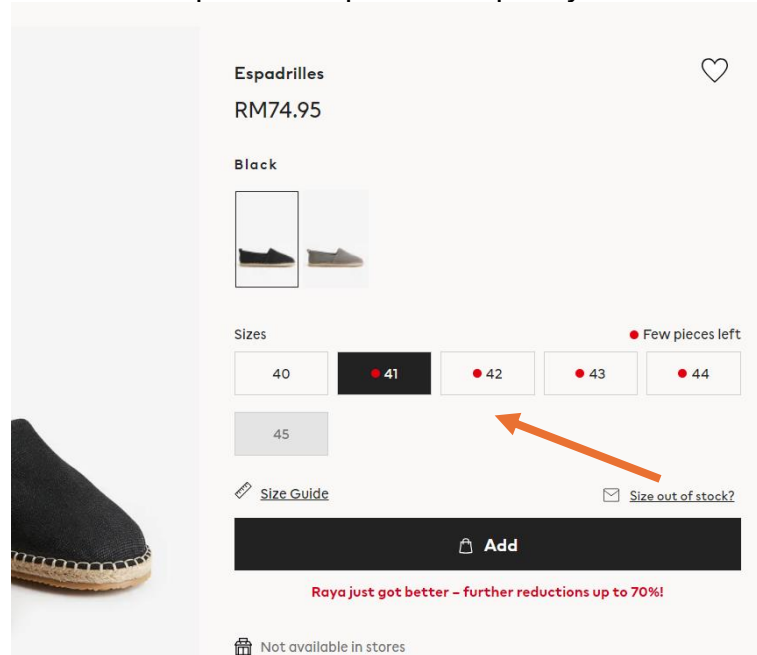

LECTURER'S NAME: DR. ZULISMAN BIN MAKSOM

DESIGN PRINCIPLE	H&M Malaysia https://www2.hm.com/en_my/index.html	H&M Arab Saudi https://sa.hm.com/en/home/
Visibility	The websites show the icon of the shopping bag with the text of “shopping bag.” Therefore, it will ease the users to find where the items that they already add to cart. 	The website only shows the icon of the shopping bag so users might not find where the shopping bag is located. For this reason, users do not know where their added to cart items are located. 

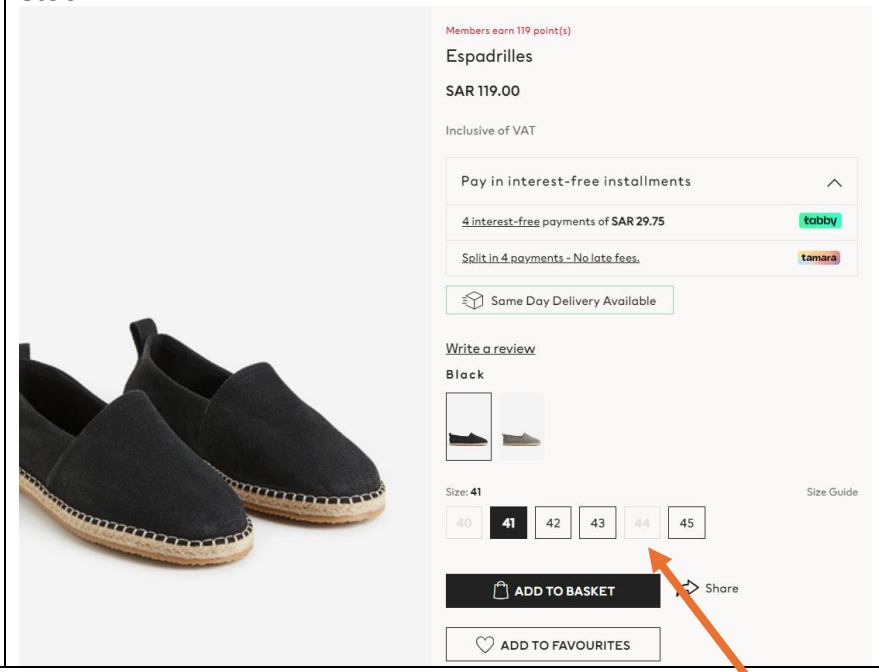

Feedback	If users want to proceed with payment, users need to log in first. So that the website will prompt log in page. Users need to fill all the requirements that are needed.	The website will prompt the log in page too for user to proceed their payment. The website requires users to fill in all the necessary information for users to proceed with the payment as usual. 
----------	---	--

Constraints

This website indicates low stock levels to motivate users to complete their purchase quickly.

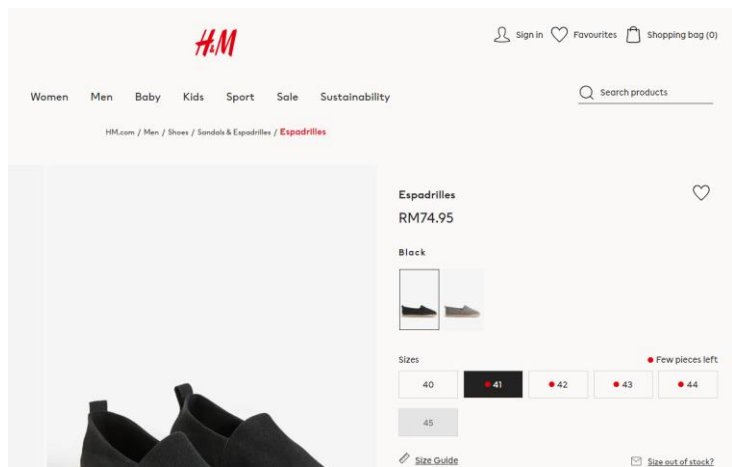

Out of stock size are not clickable, which shows the constraints employed to product availability to create a sense of urgency and encourage prompt purchasing decisions. However, on this website, it does not indicate low stock.

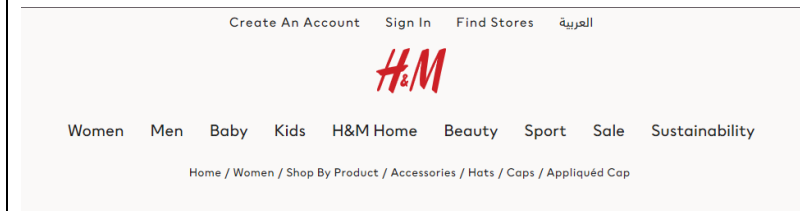

Mapping

The button will help users to go to the specific parts on the website. For example, when user clicks on the 'shopping bag' then the website will navigate user to the cart parts on the websites and interfaces of the shopping bag will be displayed. Users just need to press again on the breadcrumbs to return to the previous view of the interfaces. The breadcrumbs will be highlighted on the previous interfaces.

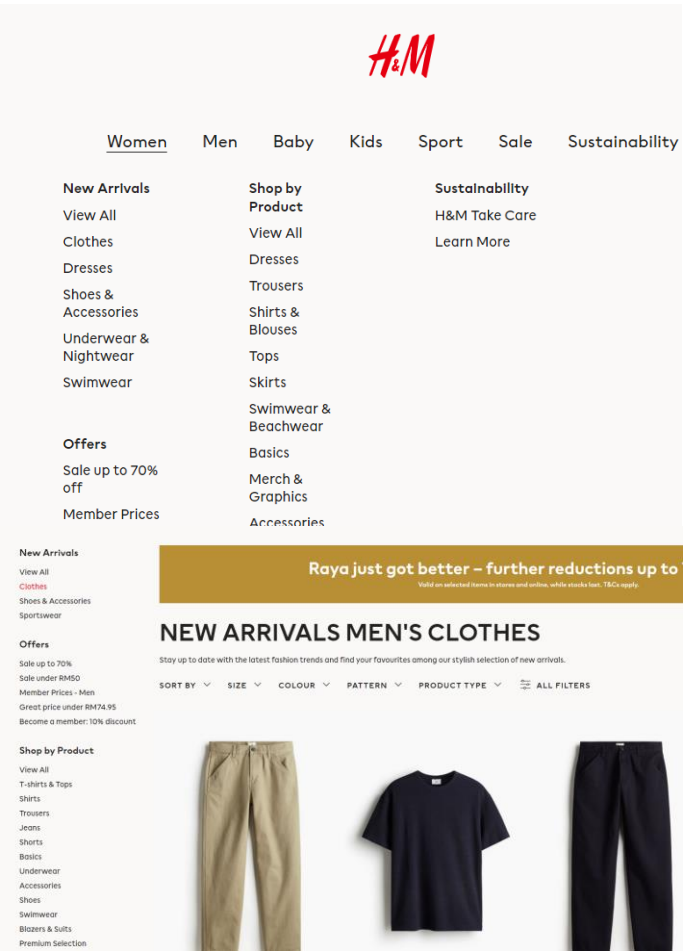

The buttons of the website will help to navigate the user too. Once user click on one of the breadcrumbs then website will display the interfaces of the breadcrumbs that user click just now. The difference was only an arrangement of the button. User also cannot click on the breadcrumbs like on the Malaysia websites. The breadcrumbs are not highlighted which user does not know in what interfaces that will be displayed.

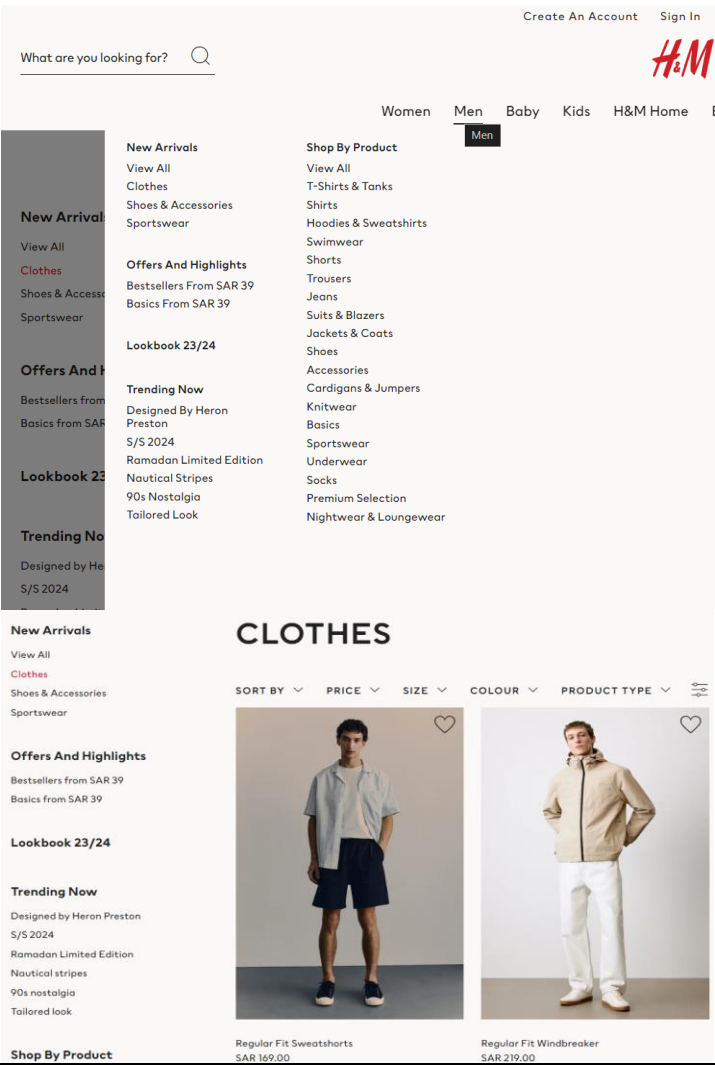

Consistency

The website provides consistency in typography, color usage, and spacing.

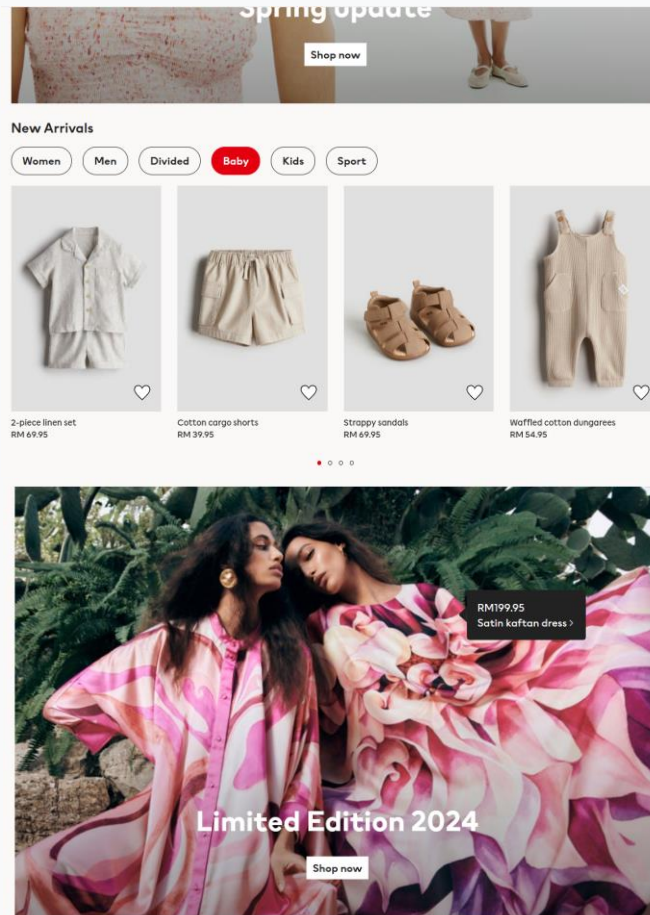

This website also provides the same consistency as Malaysia's website. Both provide consistent design patterns for common elements such as buttons, navigation menus and product listings.

Affordances

The button on the website is design in a simple way to make item purchasing easier. Simple symbols make it easier for users to understand the purpose.

Once the user clicks any button, it goes directly to the page they want. The button is designed properly and clearly to make it easier for users to purchase any item based on their preferences.
