

Please answer this question in a group of 3-4 people. Please submit latest by 11th June 2025 via ULEARN in Week 11 Section.

***ONLY GROUP LEADER SUBMIT THE QUESTION**

QUESTION:

You are required to develop a new system for a vending machine. A vending machine sells small, packaged, ready to eat items (chocolate bars, cookies, candies, etc.). Each item has a price and a name. A customer can buy an item, using a smart card (issued by the vending machine company) to pay for it. No other payment forms (i.e. cash, credit card) are allowed. The smart card records on it the amount of money available.

The functions supported by the system are:

1. Customer can buy an item (customer can choose from a list of items, pay item, take item).
2. Employees recharge the machine.
3. Employee check item.
4. Admin set up the machine (define items sold and price of items)
5. Admin monitor the machine (get number of items sold, get number of items sold per type, get total revenue)

You are required to draw a case diagram for this system.
